

Understanding and Optimizing your IT Environment

Network traffic analyzer and bandwidth monitoring

A complete traffic analytics tool, leverages flow technologies to provide real time visibility into the network bandwidth performance. A unified solution that collects, analyzes and reports that quantify exactly how the network is being used, by whom, and for what purpose.

Network traffic analysis and bandwidth monitoring

Monitor interface-level network bandwidth and traffic patterns with up to minute granularity

Bandwidth use by application, protocol and IP Address

See which applications, protocols, or IP address groups are consuming the most bandwidth.

Location based analysis and reports

This advanced feature can provide the Region wise (Country) traffic distribution information in real-time.

Network traffic forensics and reports

Analyze traffic patterns over time and create in-depth reports with just a few clicks

Next Generation Cognitive Data Center Service

All-round Management & Analysis of Enterprise Networks, Systems & Applications

Business Covered & Connected to All Major Cities in China, Hong Kong, Taiwan, Japan, Korea, East Asia, USA, Europe, Russia and Middle East Region, etc.
